AGREEMENT
BETWEEN THE ADMINISTRATIONS OF BELGIUM, FRANCE, GERMANY, LUXEMBOURG, THE NETHERLANDS AND SWITZERLAND

ON FREQUENCY PLANNING AND FREQUENCY COORDINATION AT BORDER AREAS FOR TERRESTRIAL SYSTEMS CAPABLE OF PROVIDING ELECTRONIC COMMUNICATIONS SERVICES

IN THE FREQUENCY BAND
2500-2690 MHz

Brussels, 11th October 2011
1. INTRODUCTION

The frequency band 2500 - 2690 MHz is designated for terrestrial systems capable of providing electronic communications services according to

- for Belgium, France, Germany, Luxembourg and The Netherlands, according to the Decision of the European Commission 2008/477/EC of 13 June 2008 on the harmonisation of the 2500 - 2690 MHz frequency band for terrestrial systems capable of providing electronic communications services in the Community.
- for Switzerland according to the national table of frequency allocations as approved by the Federal Council.

The Administrations of Belgium, France, Germany, Luxembourg, The Netherlands and Switzerland have agreed on the following coordination procedures.

2. PRINCIPLES OF FREQUENCY PLANNING AND FREQUENCY COORDINATION AT BORDER AREAS

Frequency coordination at border areas is necessary to ensure efficient spectrum use and equal access to spectrum in the border areas. This Agreement is based on the principles of frequency planning and frequency coordination as laid down in ECC Recommendation (11)05.

The following principles apply:

- Frequency coordination with a neighbouring country is not necessary if the mean field strength does not exceed the field strength limits provided in paragraph 3. Coordination of stations exceeding the specified mean field strength as defined in paragraph 3 would disturb the equal access and is therefore not desirable.

- Field strength values are defined within a reference frequency block of 5 MHz.

3. PROVISIONS FOR COORDINATION

3.1. Maximum field strength for FDD and TDD systems

FDD and TDD systems should have the same right to cover the border area.

Therefore FDD and TDD Base stations may be operated if the produced mean field strength at a height of 3 m above ground does not exceed the value of 65 dBμV/m in the reference bandwidth of 5 MHz at the border line, and does not exceed the value of 49 dBμV/m in the reference bandwidth of 5 MHz at a line of 6 km beyond the border.

Nevertheless for a TDD Base station the above mentioned limit values are only applicable in the 2 following cases:
• If all involved networks are TDD networks and these networks are synchronized
or
• If one involved network is an FDD system and the TDD system is operating in the frequency band 2620-2690 MHz

For all other cases, the TDD system may be operated if the produced mean field strength at a height of 3 m above ground does not exceed the value of 21 dBuV/m in the reference bandwidth of 5 MHz at the border line. In the special case that there is no TDD system involved in the other countries, the level of 21 dBuV/m can be subject to additional bilateral agreements between concerned administrations.

3.2. The use of LTE systems in border areas

In order to ensure the optimum network performance between LTE systems deployed in the border areas, the administrations shall encourage operators to coordinate the use of PCI code groups and other radio parameters, in accordance with ECC Recommendation (11)05, for LTE signals using the same centre frequency in border areas.

4. PROTECTION RADIO ASTRONOMY SYSTEMS

Under consideration of the Recommendation ITU-R RA.769-2 and of out of band emissions of the terrestrial systems capable of providing electronic communications services (see block edge mask) it must be guaranteed that an interfering radiation density of -247 dBW/(m²·Hz) is not exceeded above 2690 MHz at the radio astronomy locations Effelsberg (6°E53'01'', 50°N31'30'') and Westerbork (6°E36'15'', 52°N55'01'').

5. OPERATOR ARRANGEMENTS

The establishment of arrangements between operators shall be allowed to the extent possible, according to the provisions laid down in the "Agreement between the administrations of Belgium, France, Germany, Luxembourg, the Netherlands and Switzerland concerning the approval of arrangements between operators of mobile radio communication networks" done at Brussels on 11th October 2011.

6. FIELD STRENGTH PREDICTION

For the field strength calculations the tool of the latest version of the HCM Agreement shall be applied. Time probability in all calculations is 10%.

7. REVISION OF THE AGREEMENT

This Agreement may be modified at the request of one of the Signatory Administrations where such a modification becomes necessary in the light of administrative, regulatory or technical developments.

The technical characteristics may be reviewed in the light of practical experience of its
application and of the operation of terrestrial systems capable of providing electronic communications services in general.

8. WITHDRAWAL FROM THE AGREEMENT

Any Administration may withdraw from this Agreement subject to six months notice.

9. LANGUAGE OF THE AGREEMENT

This Agreement has been concluded in English.

One original version of this Agreement is handed over to each Signatory Administration and a copy is submitted to the Managing Administration of the HCM Agreement.

10. DATE OF ENTRY INTO FORCE

The date of entry into force is the date of signature.
Done at Brussels on 11th October 2011

For BELGIUM
Belgian Institute for Postal services and Telecommunications
On behalf of the BIPT Council,
Michael Vandroogenbroek

For FRANCE
Agence nationale des fréquences
